

2008 SEA-DOO · RXT-X 255

The 100-Hour Service

What it needs, what it takes,
and how we'll get it done.

A quick walkthrough for **Arman**
from Shawn (Marcus's buddy)

HEY ARMAN

Thanks for taking a look at this thing.

Marcus put us in touch — I really appreciate you helping me out.

My ski just rolled past **100 hours**, and it's flagging the one big scheduled service these Sea-Doos need at that mark.

This little walkthrough lays out exactly what it is, what you'd need, and roughly how long it takes — so there are no surprises. You're the pro here; this is just me handing you the full picture up front.

The short version: it's a supercharger rebuild. I buy the kit, ship it to you, and drop the ski off. Details on the next slides

→

MEET THE SKI

2008 Sea-Doo RXT-X 255

Top-of-the-line Sea-Doo for '08 — the supercharged "musclecraft."

ENGINE

Rotax 1503 4-TEC

POWER

255 HP · S/C

SUPERCHARGER

16-tooth, intercooled

HOURS

~100 hrs

Why this one matters

'08 was the first year Sea-Doo went to **metal clutch washers** in the supercharger — better than the old ceramic ones, but they still wear and are on a service clock.

3-seater

~67 mph stock

Supercharged

THE ONE THING IT NEEDS

Supercharger rebuild

100-HOUR SERVICE · DUE NOW

At **100 hours (or 2 years)** the supercharger gets a rebuild: new **clutch washers, bearings, seals,** and shaft hardware from the kit.

Why it's not optional: as the clutch washers wear, the clutch starts to slip. Left too long, it can shed metal/debris *into the engine* — which turns a ~\$400 job into a new motor. The plastic bearing cages also get brittle with heat cycles over time, which is the "2-year" half of the rule.

Bottom line: it's the single most important scheduled service on these skis — and mine's right at the line.

HOW THIS WORKS

Dead simple on your end

I order the kit

- 1 OEM Sea-Doo rebuild kit — I buy it and ship it straight to your shop.

I drop the ski off

- 2 On the trailer, whenever works for you. Kit's already there waiting.

You do the rebuild

- 3 Pull the S/C, rebuild it on the bench, reinstall, quick test.

I pick it up

- 4 We square up on your time, and I'm out of your hair.

You don't have to source a single part — just bring the wrenches.

THE KIT — ALREADY HANDLED

OEM supercharger rebuild kit

**Sea-Doo OEM P/N 420881102**

(supersedes 420881100 / 420881101) — the 16-tooth intercooled kit for the 1503. **Steel washers.**

What's in the box

- ▶ Compressor shaft + drive gear
- ▶ Bearings & seals
- ▶ Clutch / spring washers (the wear part)
- ▶ All the small hardware to button it back up

Tell me your call: OEM kit is my plan (best for the steel washers). If you'd rather run a specific brand you trust, say the word before I order.

WHAT THE JOB LOOKS LIKE

The rebuild, start to finish

You know this cold — just so we're on the same page:

- ▶ Pull the supercharger off the engine
- ▶ Strip it down on the bench — clutch, bearings, seals, shaft
- ▶ Press in the new bearings, fit the new washers & shaft from the kit
- ▶ Reassemble to spec with blue threadlocker, torque the hardware
- ▶ Reinstall on the engine, reconnect, and run it to confirm it boosts & holds

Done = S/C rebuilt to torque spec, back on the ski, fired up, holding boost. Clean and quiet.

WHAT YOU'D NEED

Tools for the bench

TORQUE

Torque wrench (ft-lb)

HOLD

Bench vise

BEARINGS

Shop / arbor press

CLIPS

Snap-ring pliers

LOCK

Blue Loctite (243)

TIDY

Shop towels

The one special bit

The S/C needs a **shaft-holding tool + drive-gear holding tool** to crack the top nut. If you don't already have the Sea-Doo S/C tool set, just tell me — **I'll add the tool kit to the parts order.**

HOW LONG IT TAKES

Roughly half a day, tops

~2–3 hrs bench time

The actual rebuild for someone who's done it before.

+ pull & reinstall

Getting the S/C off and back on, plus a test run.

Pro shops quote a **1-day turnaround** on these, so no rush on my end — whatever fits your schedule. I'm flexible on drop-off and pickup.

QUICK RECAP

That's the whole job

'08 RXT-X 255 @ ~100 hrs → supercharger rebuild

I ship you the **OEM kit** (+ tool kit if you need it)

I drop the ski off, you rebuild, I pick up

~half a day of work, your schedule

Let me know two things: **(1)** OEM kit good with you? **(2)** Need me to add the S/C tool kit? Then I'll order and we'll set a drop-off.

Thanks a ton, Arman —

Shawn

Reference only · not a substitute for the Sea-Doo shop manual torque specs. You're the mechanic — this is just the heads-up.
